

DATATROP AI SYSTEMS

COMPANY POSITIONING & SALES PLAYBOOK

The Official Manual for Business Development Managers

INTERNAL — CONFIDENTIAL

Prepared for the Datatrop AI Business Development Team | Version 1.0 | 2026

Table of Contents

- 00** Purpose of This Manual
- 01** Who We Are
- 02** Ideal Customer Profiles
- 03** The Five Problems We Solve
- 04** Service Lines & Deal Sizing
- 05** Product Portfolio
- 06** Discovery Question Bank
- 07** Talk Tracks by Scenario
- 08** Objection Handling
- 09** Target Industries
- 10** Opportunity Qualification Scorecard
- 11** Datatrop Ambition

00 Purpose of This Manual

This document is the single source of truth for how Datatrop AI Systems talks about itself, qualifies opportunities, and sells. Every Business Development Manager (BDM) — new or experienced — is expected to internalize this manual before running client conversations on Datatrop's behalf.

Datatrop does not compete on price, speed of delivery, or tool familiarity. We compete on the size and permanence of the transformation we create inside a client's business. This manual exists to make sure every BDM protects that positioning in every conversation, every proposal, and every deal they bring in.

How to use this manual

- Read Sections 1–4 before your first client call — they define who we are and who we sell to.
- Keep Section 6 (Discovery Question Bank) open during live discovery calls.
- Refer to Section 8 (Objection Handling) whenever a prospect pushes back on scope or price.
- Use Section 10 (Qualification Scorecard) before any opportunity enters the pipeline as a serious deal.

01 Who We Are

Datatrop AI Systems builds AI-Powered Business Systems for ambitious organizations. We design and engineer intelligent systems that connect people, processes, data, and AI into a unified operating model.

We do not position ourselves as an automation agency. Automation is only one component of what we build. Our real product is the system: the connected, intelligent operating layer that sits underneath a client's entire business.

Our goal is to create:

- Enterprise Operating Systems
- AI-native Products
- Decision Intelligence Platforms
- AI Workforce & Voice Ecosystems
- Revenue Intelligence Systems
- Autonomous Business Processes

✗ What We Are Not

- Zapier agency
- Workflow setup company
- Simple chatbot vendor
- CRM implementation company
- Task automation freelancers

✓ What We Are

- Business System Architects
- AI Systems Engineers
- Enterprise Process Transformation Specialists
- AI Product Builders
- Decision Intelligence Consultants
- Revenue & Operations Transformation Partners

The BDM Elevator Pitch

"We build AI-powered business systems — not workflows, not chatbots. When a company's complexity has outgrown Excel, disconnected software, and manual processes, we design the intelligent operating layer that replaces all of it and gives leadership real-time visibility and control." —30-second version for cold outreach and first calls

02 Ideal Customer Profiles

Not every company is a fit. A BDM's most important skill is recognizing — within the first five minutes of a conversation — whether a prospect belongs in Tier 1, Tier 2, Tier 3, or none of the above. Chasing the wrong-tier prospect wastes cycles and trains the market to see Datatrop as a cheap automation vendor.

Tier 1 — Mid-Market Companies

Our anchor segment. These organizations have enough operational complexity to need a real system, and enough revenue to fund one.

Attribute	Detail
Company size	50–1,000 employees
Revenue range	₹50 Cr – ₹1,000 Cr
Typical symptoms	Multiple departments, disconnected systems, spreadsheet dependency, manual reporting, growing complexity
Example industries	Manufacturing, Automotive, Distribution, Logistics, Trading companies, Healthcare groups

Tier 2 — Fast-Growing Companies

Organizations scaling rapidly and outgrowing off-the-shelf software. They may be smaller than Tier 1 today, but their growth trajectory means today's spreadsheet workaround becomes tomorrow's operational crisis.

- Multi-location businesses
- D2C brands
- E-commerce companies
- Service organizations
- Franchise businesses

Tier 3 — Innovation-Led Enterprises

Organizations that don't have an operational pain problem as much as a competitive advantage problem. They are looking for AI to become a strategic differentiator, not just an efficiency gain.

- Financial institutions
- Insurance companies
- Large sales organizations
- Consulting firms

- International enterprises

BDM Rule of Thumb

- If the prospect's ask fits in a single sentence starting with "can you automate..." and the company has no other operational complexity behind it, it is very likely NOT a Datatrop-fit deal. Qualify hard before investing time.
- The strongest signal of a Tier 1 fit is a leader who says some version of: "We've outgrown Excel and nobody has real-time visibility."

03 The Five Problems We Solve

Every Datatrop engagement should be framed around one (or more) of these five problem categories. This is the language BDMs should use in discovery, in proposals, and in every piece of client-facing communication — not "we can build you an automation."

1. Fragmented Operations

Symptoms: Excel everywhere, data duplication, manual handoffs, no visibility.

Solution: Unified Business Operating Systems — ERP-like systems, custom operations systems, finance integration, inventory systems, CRM ecosystems.

"Sufi Group Unified Operations System — covering sales, procurement, inventory, dispatch, finance, accounting and HR in one platform." —Reference case

2. Revenue Leakage

Symptoms: Missed leads, poor follow-up, lost opportunities, low conversion.

Solution: Revenue Intelligence Systems — lead scoring, AI sales assistants, follow-up engines, opportunity detection, conversion optimization.

3. Communication Chaos

Symptoms: Calls on personal phones, no visibility, lost customers, no accountability.

Solution: Communication Operating Systems — cloud telephony, WhatsApp centralization, AI call intelligence, contact center systems, omnichannel communication.

"Automotive communication system with centralized IVR, CRM tracking, dashboards and AI call intelligence." —Reference case

4. Lack of Organizational Intelligence

Symptoms: Knowledge trapped in employees, decisions depend on individuals, no institutional memory.

Solution: Enterprise Knowledge & Memory Systems — AI memory systems, knowledge assistants, searchable enterprise knowledge bases, context-aware copilots.

5. High Human Dependency

Symptoms: Repetitive work, hiring challenges, process bottlenecks.

Solution: AI Workforce Systems — voice agents, AI employees, multi-agent systems, autonomous task execution.

"AI Voice Ecosystems capable of autonomous customer interactions with memory and specialized capabilities." —Reference case

04 Service Lines & Deal Sizing

Use this table to anchor pricing conversations early. Never let a discovery call end without the prospect having a rough sense of the investment range — ambiguity here is what causes deals to be mis-scoped later.

Service Line	Examples	Deal Size
1. Enterprise AI Systems	ERP modernization, unified business platforms, custom enterprise software, department integration, operational intelligence systems	₹10L – ₹2Cr+
2. AI Workforce & Voice Systems	Voice agents, sales agents, support agents, internal assistants, multi-agent ecosystems	₹5L – ₹50L
3. Revenue Intelligence Systems	AI sales systems, lead intelligence, sales automation, customer intelligence, conversion optimization	₹3L – ₹25L
4. Communication Intelligence Platforms	Contact center systems, omnichannel communication, telephony intelligence, customer communication hubs	₹5L – ₹50L
5. AI Product Development	SaaS platforms, AI-native products, industry-specific platforms, internal commercial products	Scoped per engagement

05 Product Portfolio

Current Product

NEGO

AI-powered sales negotiator for e-commerce that detects buying intent and performs real-time, personalized negotiations. Use NEGO as proof that Datatrop doesn't just build for clients — we productize our own IP.

Future Product Categories

- AI Sales OS
- Enterprise Knowledge OS
- AI Contact Center OS
- Manufacturing Intelligence OS
- AI Discovery Platform
- AI Workforce Platform

06 Discovery Question Bank

Discovery is where deals are won or lost. The goal is not to pitch — it is to surface enough operational pain that the prospect describes their own problem in system-level terms. Use these questions, organized by the five problem categories from Section 3.

Fragmented Operations

1. How many different tools or spreadsheets does your team touch to complete one order / one project / one customer journey, start to finish?
2. When leadership needs a number — inventory, cash position, order status — how long does it take to get a reliable answer?
3. Where does data get re-typed by hand between systems today?

Revenue Leakage

4. What happens to a lead if the salesperson who owns it is unavailable for 48 hours?
5. How do you currently know which leads are worth chasing versus which are dead?
6. What percentage of quotes or proposals go unanswered, and do you know why?

Communication Chaos

7. Are customer conversations happening on personal phones or personal WhatsApp numbers today?
8. If a key salesperson left tomorrow, would you lose the customer relationship and the conversation history with it?
9. Can you currently see call volume, call outcomes, or missed calls in a dashboard?

Lack of Organizational Intelligence

10. If your most experienced employee left tomorrow, what knowledge would leave with them?
11. How do new hires currently learn 'how we do things here'?
12. When a decision needs to be made, who has to be in the room, and why?

High Human Dependency

13. What repetitive tasks are consuming the most hours across your team each week?
14. Where has hiring or attrition created a bottleneck in the last 12 months?
15. If call or task volume doubled tomorrow, what would break first?

07 Talk Tracks by Scenario

Cold Outreach Opener

"We work with [industry] companies that have outgrown spreadsheets and disconnected software. We build the AI-powered operating system that replaces all of it — is that a conversation worth having, or is that not where [Company] is today?"

When a prospect says: "We just need a simple automation / chatbot"

"Happy to talk through that — and often what looks like a single automation is actually a symptom of a bigger gap. Can I ask a couple of questions about how [that process] connects to the rest of your operations, so we scope this correctly rather than build something that gets outgrown in six months?"

When a prospect asks: "How is this different from hiring a Zapier freelancer?"

"A freelancer connects two tools. We design the operating system your business runs on — the data model, the intelligence layer, and the workforce of AI agents sitting on top of it. Our engagements start where a typical automation project ends."

Transition from Discovery to Proposal

"Based on what you've described — [restate 2–3 specific pains in the prospect's own words] — this isn't a single automation, it's a [Service Line name] engagement. Let me put together a scoped proposal so you can see exactly what we'd build and the investment involved."

08 Objection Handling

Objection	BDM Response Strategy
"This seems expensive compared to [cheap automation vendor]"	Reframe on outcome, not line-item cost. Ask what the cost of the status quo has been over the last 12 months (lost leads, manual hours, errors). Position Datatrop as replacing multiple tools and headcount-equivalent effort, not competing with a \$20/month subscription.
"We already have an ERP / CRM"	Clarify we are not necessarily replacing it — we may be building the intelligence and integration layer on top of or around it. Ask what percentage of their team still works around the existing system in spreadsheets.
"We want to start small and see results first"	Agree — but scope the 'small' start as Phase 1 of a named system (e.g., Revenue Intelligence System Phase 1), not a standalone automation. Protects future expansion and pricing.
"Can you just build [narrow feature] for us?"	Build it, but frame it inside the relevant Service Line and document the broader roadmap in the proposal, so the client sees the feature as step one of a system, not the whole engagement.
"How do we know this will work for our industry?"	Reference the closest matching case example from Section 3, and offer a short discovery/audit engagement to de-risk the larger commitment if appropriate.

09 Target Industries

Priority industries for BDM prospecting, in order:

16. Manufacturing
17. Automotive
18. Distribution & Trading
19. Logistics
20. Healthcare
21. Retail Chains
22. D2C & E-commerce
23. Professional Services
24. Financial Services
25. Education Groups

10 Opportunity Qualification Scorecard

Before logging an opportunity as a serious pipeline deal, score it against the criteria below. Opportunities scoring below 12/20 should be treated cautiously — they may be better served with a narrow, capped-scope engagement rather than a full system sale, or may not be a Datatrop fit at all.

Criterion	0 pts	2 pts	4 pts
Company tier fit	No clear tier match	Tier 2 fit	Tier 1 or Tier 3 fit
Operational complexity	Single process, single team	Multiple processes, one department	Cross-departmental complexity
Budget authority present	Unknown / gatekeeper only	Influencer identified	Economic buyer engaged
Pain articulated in own words	Vague / vendor-prompted only	Partially articulated	Clearly and specifically articulated
Urgency / trigger event	No trigger identified	Soft timeline	Active trigger (growth, failure, new leadership)

11 Datatrop Ambition

"To become the company organizations approach when business complexity exceeds the capability of conventional software."

"Datatrop engineers intelligent business systems that transform organizations into AI-native enterprises."

Every BDM is a guardian of this positioning. A single mis-scoped, underpriced 'quick automation' deal does more damage to the Datatrop brand than a lost opportunity ever could. When in doubt, qualify harder, sell the system, and protect the story we are building in the market.
